

House Bill 307

Environment - Packaging Materials - Producer Responsibility

MACo Position: **SUPPORT**

To: Environment & Transportation and
Economic Matters Committees

Date: February 2, 2022

From: Dominic J. Butchko and
D'Paul Nibber

The Maryland Association of Counties (MACo) **SUPPORTS** HB 307. This bill would reasonably require packaging producers to take more responsibility for the role they play in adding to the waste stream by providing new resources to struggling recycling networks.

Currently, all costs associated with recycling and waste management are left to local governments, and in effect, taxpayers. Due largely to declining markets for recycled commodities, county recycling networks have experienced significant hardships and have been forced to draw taxpayer subsidies to continue their operations.

HB 307 outlines a framework for an Extended Producer Responsibility (EPR) model that would place responsibility on packaging producers for end-of-life management. Industry members would form one or more producer responsibility organizations that would collect payments from producers based on the recyclability of product packaging. Local governments would be eligible to apply for and receive reimbursements for the work they are already doing, including labor costs, collecting, transporting, and processing covered materials. Counties would then be able to invest any new funds back into their networks to help ease the burden on taxpayers. HB 307 would also encourage producers to make packaging that is more easily recyclable and more environmentally friendly.

HB 307 would provide needed financial support to struggling local government recycling networks by holding producers responsible for their products. Accordingly, MACo requests a **FAVORABLE** report on HB 307.
